

## FEATURES

- ❑ Real-time process display
- ❑ Graphical and numeric view
- ❑ Real-time multichannel trending
- ❑ Process history
- ❑ Historical zoom facility
- ❑ Alarm logging
- ❑ Password protection
- ❑ Simple operation
- ❑ Low system requirement
- ❑ Multidrop RS485 communication
- ❑ Best price vs performance

MicroDAS gives you 'at-a-glance' access to real time process parameters in numeric and graphical form. It is a pre-engineered software package that provides all benefits of on-line data logging and trending, without the need for complex system set-up and configuration normally associated with this type of packages. The software can interface with multiple scanners, indicators and data acquisition systems using multidrop RS485 communication. With the feature of historical data logging function the entire process history can be recorded for future analysis or validation. A 24 hours historical zoom feature is provided to view last 24 hours process history with 2 seconds resolution. It also provides alarm generation and logging capabilities.

Micro DAS is incredibly easy to configure by people with average technical skills. If you can operate modern Windows-based packages like Microsoft Excel or Word, you should have no problems using a MicroDAS application.

**APPLICATION:**

**MicroDAS System Requirements:**

**HARDWARE SPECIFICATIONS**

- Computer : Pentium based personal computers; P-III minimum, P-IV recommended
- Memory : 128 megabytes RAM min
- Disk space : 100 megabytes min
- Graphic Support : SVGA (Min. screen area: 800 × 600 pixels)
- Mouse : Any mouse could be used for configuration
- Communication Port : One free Serial Communication port
- Drive : CDROM drive (For Installation)
- Converter : Built-in RS485 or External Converter required for more than 16 channels

**SOFTWARE SPECIFICATIONS**

- Operating Systems : Windows 98 SE minimum or Windows 2000 or XP recommended

- SPECIFICATIONS:**
- Display : Numeric and Graphical
  - Trending : Multichannel
  - Data logging : Provided
  - Zoom facility : 24 hours
  - Alarm logging : Provided
  - System configuration : All parameters are user selectable
